

# Extension theorems via neighborhood operators

Jerzy DYDAK

31. 5. 2017

## **Abstract**

Extension results (Urysohn Lemma, Tietze Extension Theorem) in the following four categories are unified via the concept of a neighborhood operator:

1. The topological category,
2. The coarse category,
3. The uniform category,
4. The hybrid category.

Joint work with Thomas Weighill.
